

CYBER ADVISORS AND ZECURION PARTNER TO DELIVER WORLD-CLASS INTERNAL SECURITY PROTECTION TO THE MID-SIZED MARKET

Zecurion Viewed as the Only “Single Bullet” that Delivers Both Security and Control

New York — May 6th, 2010 — [Zecurion Inc.](#), a leading developer of information security systems protecting against insider threats, expands Zecurion Advantage Partner Program with the addition of [Cyber Advisors](#). Servicing all major verticals worldwide, Cyber Advisors fields hundreds of security-related calls that Zecurion addresses. Users want freedom and mobility to do their job, but the risks associated are too high.

“Auditing and compliance used to be issues specific to the financial and healthcare sectors, but lately they have been spilling over into other industries,” says Cyber Advisors president and CEO Shane Vinup. “There are many security products on the market, but they don’t give companies the control they need. Zecurion is the only single-bullet security solution that fits in terms of price, and allows users to work when and where they want while maintaining corporate control over the data.”

“We’ve been aggressive in terms of creating a security solution that blocks, controls, and encrypts sensitive information, and we’ve been equally aggressive at creating a partner program that will attract high caliber partners like Cyber Advisors,” says Zecurion CEO Alexey Raevsky. “We’re pleased that Cyber Advisors selected Zecurion to be their security partner.”

About Cyber Advisors:

Since 1997, Minnesota-based Cyber Advisors (CA) has been providing information technology, e-business services, and solutions that work and grow with their clients. Consistently ranked one of the fastest growing companies by CRN and Inc., CA takes a true 360-degree view of technology and business, applying their knowledge and expertise to build, support, and use technology that enriches their clients and enhances performance.
